

## Our Mission

To prevent kidney disease and improve the quality of life for those living with it.

## Guiding Principles

- Integrity – We are all trusted professionals who deliver as promised
- Caring – Compassion and respect drive our actions
- Teamwork – Intentionally working together toward a common goal
- Innovation – We are the change we want to see in the world
- Dedication – We are committed to making a positive difference

Since 1955, the National Kidney Foundation of Michigan has led the fight against these life-threatening diseases. We have enhanced the lives of many Michigan residents through our patient services, prevention programs, education programs, children’s programs and research.

Our efforts have also changed legislation, ensured quality care for patients and advanced medical knowledge. We have informed the public about kidney disease and increased awareness of the critical need for organ and tissue donations. The Foundation has accomplished such success with the help and generosity of the community.

### Just a few of the programs and services we offer:

- |                                 |                               |                              |
